

Question Label : Multiple Choice Question

TravelEase: A travel app team debates two final yet distinct ideas: (A) personalized trip planning with AI, (B) social trip-sharing among groups. Research shows both resonate with different segments of target customers.

[TravelEase] A sensible next step consistent with KDT would be to:

Answer the question based on the scenario given:

Options :

- 6406535903600. ✖ Pick A because AI is trending
- 6406535903601. ✖ Pick B because it has viral potential
- 6406535903602. ✔ Prototype both concepts at appropriate fidelity and test with customers
- 6406535903603. ✖ Combine both ideas immediately into a single release

Question Number : 313 Question Id : 6406531815927 Question Type : MCQ

Correct Marks : 2

Question Label : Multiple Choice Question

FoodFleet: A food-delivery startup’s customer journey map (CJM) shows “emotional valleys” around order delays and unclear driver updates.

[FoodFleet] The next logical step in the KDT process is to:

Answer the question based on the scenario given:

Options :

- 6406535903604. ✖ Conduct silent brainstorming to interpret emotional valleys
- 6406535903605. ✔ Cluster the identified valleys into problem themes
- 6406535903606. ✖ Simplify the CJM to avoid focusing on valley moments
- 6406535903607. ✖ Directly move to define desired results (ENV model)

Question Label : Comprehension

Consider the example of cascade discussed in the lecture but with a modification that now the urn is containing either 3 blue balls and 1 red ball or 3 red balls and 1 blue ball with equal probability. That simply means that the urn is equally likely to be blue-majority urn or red-majority urn. We assume everyone hears what the previous individuals report and get their own private signal by randomly drawing one ball from the urn.

Based on the data, answer the given subquestions

Sub questions

Question Number : 315 Question Id : 6406531815930 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

Suppose one ball is picked from the red majority urn. What is the probability that the ball is blue?

Options :

6406535903610. ✓ $1/4$

6406535903611. ✗ $3/4$

6406535903612. ✗ $1/5$

6406535903613. ✗ $3/5$

Question Number : 316 Question Id : 6406531815931 Question Type : MCQ

Correct Marks : 2

Question Label : Multiple Choice Question

What is the probability that the urn is red-majority if the first student draws a red ball?

Options :

6406535903614. ✗ $2/5$

6406535903615. ✗ $3/5$

6406535903616. ✓ $3/4$

6406535903617. ✗ $1/4$

Question Number : 317 Question Id : 6406531815932 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

Should the first student guess the urn to be blue majority (in continuation to the previous question)?

Options :

6406535903618. ✗ Yes

6406535903619. ✓ No

Question Number : 318 Question Id : 6406531815933 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

Now suppose, first three students draw the ball in the sequence (Red, Red, Blue).

What is the probability of getting this sequence if the urn is a blue-majority urn?

Options :

6406535903620. ✓ $3/64$

6406535903621. ✗ $9/64$

6406535903622. ✗ $3/16$

6406535903623. ✗ $9/16$

Find a stable matching system for the following preference structure using the Gale–Shapley algorithm, when the men propose to the women:

Women: A, B, C, D.

	A	B	C	D
a	1	2	4	2
b	2	4	2	1
c	3	1	1	3
d	4	3	3	4

Men: a, b, c, d.

	A	B	C	D
a	4	2	1	3
b	2	1	3	4
c	3	1	4	2
d	2	4	1	3

In a stable matching when men propose to women, answer is case sensitive

Question Label : Comprehension

(Bayesian Game) Consider a variant of the situation modelled by *Battle of Sexes* (BoS) (as discussed in lectures) in which player 1 is unsure whether player 2 prefers to go out with her or prefers to avoid her, whereas player 2, as before, knows player 1's preferences. Specifically, suppose player 1 thinks that with probability $1/2$ player 2 wants to go out with her, and with probability $1/2$ player 2 wants to avoid her. The situation is depicted in the following matrix of a static game with incomplete information:

		prob. $\frac{1}{2}$		prob. $\frac{1}{2}$	
		1		2	
2		B S		B S	
	B	3, 1	0, 0	3, 0	0, 3
	S	0, 0	1, 3	0, 1	1, 0
		2 wishes to meet 1		2 wishes to avoid 1	

With the help of this game matrix, we may come up with the following table depicting expected payoff of player 1 corresponding to different actions of both types of player 2.

		Player 2 (both types)			
		(B, B)	(B, S)	(S, B)	(S, S)
Player 1	B	a	b	c	d
	S	p	q	r	t
