Which of the following are best practices associated with Streaming applications?

Options :

6406533052899. ✔ Use a message store that supports message replay so that no data is lost in processing.

6406533052900. ✔ "Hot potato" principle is when the streaming application operates on the minimum amount of processing to produce valid output, which then becomes input for the next minimal processor, and so on, thus ensuring that no single process is doing too many things in one go.

6406533052901. ✖ Hadoop is best suited for executing Streaming applications.

6406533052902. ✔ Use checkpointing when faced with mission-critical workloads that require 100% accuracy.

6406533052903. ✖ Handle state pollution by restarting the persistent store software periodically.

Question Label : Multiple Select Question

You are given the task of improving the performance of a Spark SQL program that is doing a simple count after a series of transformations. You suspect that the culprit is the main transformation job in the program. When you run EXPLAIN on that SQL, you see that Spark wrongly estimates that there are only 10 values for the key on which the main transformation job is hinged upon, whereas in reality the underlying data has a million values for that key. What actions would you perform from the below to improve performance of the program?

Options :

6406533052914. ✖ Create all tables as external tables.

6406533052915. ✔ Ensure cost based optimizer (CBO) is ON.

6406533052916. ✖ Partition all tables on the same key on which the aggregate is happening.

6406533052917. ✔ Run ANALYZE on all tables to ensure the right estimates are available to the optimizer.

6406533052918. ✔ Cache the table in a step with actions ahead of the SQL statement that is the culprit.

Suppose that you receive a piece of e-mail whose subject line contains the phrase "check this out" (a popular phrase among scammers). Based just on this and without looking at the sender or the message content, what is the chance that the message is spam? Suppose that 40% of all your emails are spam and the remaining 60% are emails you want to receive. Suppose that 1% of all spam messages contain the phrase "check this out" in their subject lines, while 0.4% of all non-spam messages contain this phrase.

Based on the above data, answer the given subquestions.

Question Label : Comprehension

A joint enterprise of three partners, 1, 2, and 3, consists of a travel agency, a car rental agency, a tour company, a souvenir shop, and a delivery service. The owner of the car rental agency, 1, forms a partnership with the owner of the travel agency, 2. Later the two purchase a souvenir shop, which they let their wives run. The owner of the tour company, 3, enters into a partnership with 2 and the two open a delivery service. Now 3 enters into the comprehensive partnership and the enterprise is the operation of all these businesses together.

We need to remember that $v(S)$ is the price that coalition S can achieve in the market for all the assets that belong either to it or to its sub-coalitions. We shall describe the game in terms of the coalition function:

$$\begin{aligned} v(1) &= 20 & v(2) &= 30 & v(3) &= 10 & v(1, 2) &= 40 \\ v(1, 3) &= 0 & v(2, 3) &= 30 & v(1, 2, 3) &= 60 & v(\phi) &= 0 \end{aligned}$$

At a certain stage the joint enterprise starts losing money and the partners decide to liquidate it.

Calculate how much each of the partners will get from the sale of the whole enterprise, if they carry out the division according to the procedure for dissolving a partnership.

Based on the above data, answer the given subquestions.

Correct Marks : 1

Question Label : Multiple Choice Question

If player 1 chooses 1.5 hour as his action, the best response of player 2 will be

Options :

6406533053057. ✖ 1.5

6406533053058. ✖ 1

6406533053059. ✔ 1.25

6406533053060. ✖ 0

Question Number : 312 Question Id : 640653907049 Question Type : MCQ Calculator : Yes

Correct Marks : 1

Question Label : Multiple Choice Question

How much negative campaign time each player will choose under a symmetric and unique Nash equilibrium?

Options :

6406533053061. ✖ 1.5

6406533053062. ✔ 1

6406533053063. ✖ 1.25

6406533053064. ✖ 0

Question Number : 313 Question Id : 640653907050 Question Type : MCQ Calculator : Yes

Correct Marks : 1

Question Label : Multiple Choice Question

Equilibrium payoff of each player will be

Options :

6406533053065. ✖ -1.5

6406533053066. ✖ 1

6406533053067. ✔ -1

6406533053068. ✖ 0

Question Number : 314 Question Id : 640653907051 Question Type : MCQ Calculator : Yes

Correct Marks : 1

Question Label : Multiple Choice Question

Now assume that this game is repeated infinitely.

If the parties cooperate and sign a binding agreement

on how much to campaign, they choose $a_1 = a_2 = 0$.

What will be the payoff of each player in each stage game if they stick to this agreement

Options :

6406533053069. ✖ -1.5

6406533053070. ✖ 1

6406533053071. ✖ -1

6406533053072. ✔ 0

Question Number : 315 Question Id : 640653907052 Question Type : MCQ Calculator : Yes

Correct Marks : 1

Question Label : Multiple Choice Question

Now assume that this game is repeated infinitely.

If the parties cooperate and sign a binding agreement on how much to campaign, they choose $a_1 = a_2 = 0$.

What should be the level of campaign a player should choose if he wants to deviate from this agreement to get the payoff of $\frac{1}{4}$

Options :

6406533053073. ✖ 1

6406533053074. ✔ $\frac{1}{2}$

6406533053075. ✖ $\frac{1}{3}$

6406533053076. ✖ $\frac{1}{4}$

Question Number : 316 Question Id : 640653907053 Question Type : MCQ Calculator : Yes

Correct Marks : 3

Question Label : Multiple Choice Question

Now assume that this game is repeated infinitely.

If the parties cooperate and sign a binding agreement on how much to campaign, they choose $a_1 = a_2 = 0$.

For which discount factors $\delta \in (0, 1)$ can this agreement cannot be supported as a subgame perfect equilibrium of the infinitely repeated game?

Options :

6406533053077. ✖ $\delta \geq \frac{1}{5}$

6406533053078. ✔ $\delta \leq \frac{1}{5}$

6406533053079. ✖ $\delta \geq \frac{1}{3}$
