THIS IS QUESTION PAPER FOR THE SUBJECT "DEGREE LEVEL : GAME THEORY AND STRATEGY (COMPUTER BASED EXAM)"

ARE YOU SURE YOU HAVE TO WRITE EXAM FOR THIS SUBJECT?

CROSS CHECK YOUR HALL TICKET TO CONFIRM THE SUBJECTS TO BE WRITTEN.

(IF IT IS NOT THE CORRECT SUBJECT, PLS CHECK THE SECTION AT THE TOP FOR THE SUBJECTS REGISTERED BY YOU)

Options :

6406536035227.  YES

6406536035228.  NO

Question Id : 6406531862929 Question Type : COMPREHENSION Sub Question Shuffling Allowed : No Group Comprehension Questions : No Question Pattern Type : NonMatrix Question Numbers : (2 to 3)

Question Label : Comprehension

Three machines, A, B, and C, produce respectively 50%, 30% and 20% of the total no. of items of a factory. The percentages of defective output of these machines are 3%, 4% and 5%.

Based on the above data, answer the given subquestions.

Sub questions

Question Number : 2 Question Id : 6406531862930 Question Type : SA

Correct Marks : 2

Question Label : Short Answer Question

If an item is selected at random, the probability that the item is defective is _____

Response Type : Numeric

Evaluation Required For SA : Yes

Show Word Count : Yes

Answers Type : Range

Text Areas : PlainText

Possible Answers :

0.035 to 0.04

Question Number : 3 Question Id : 6406531862931 Question Type : SA

Correct Marks : 2

Question Label : Short Answer Question

Suppose an item is selected at random and found to be defective. The probability that the item was produced by machine A will be _____

Response Type : Numeric

Evaluation Required For SA : Yes

Show Word Count : Yes

Answers Type : Range

Text Areas : PlainText

Possible Answers :

0.40 to 0.41

Question Id : 6406531862932 Question Type : COMPREHENSION Sub Question Shuffling Allowed : No Group Comprehension Questions : No Question Pattern Type : NonMatrix Question Numbers : (4 to 9)

Question Label : Comprehension

Consider the market for a single network good as discussed in the lecture, and write a different consumer's utility function for joining the network as $U(\theta) = a + 3\theta\nu n^e$ capturing the idea that it may be more plausible that a user who has a higher value for the standalone component of a technology also assigns more importance to the size of its network (i.e., consumers differ in their valuation of both the standalone and the network benefits). Here, a is the standalone benefit, $\nu > 0$ measures the network effect, n^e is the expected number of users joining the network and θ is uniformly distributed on the unit interval.

Based on the above data, answer the given subquestions.

Sub questions

Question Number : 4 Question Id : 6406531862933 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

The value $\hat{\theta}$ corresponding to an indifferent consumer for a given price p and a given expected network size n^e will be

Options :

6406536035231. ✓ $\frac{p-a}{3\nu n^e}$

6406536035232. ✗ $\frac{p}{(a+3\nu n^e)}$

6406536035233. ✗ $\frac{ap}{(a+3\nu n^e)}$

6406536035234. ✗ None of these

Question Number : 5 Question Id : 6406531862934 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

The maximum value of p to have buyers will be

Options :

6406536035235. ✓ $a + 3vn^e$

6406536035236. ✗ $3vn^e$

6406536035237. ✗ $\frac{a}{3vn^e}$

6406536035238. ✗ $\frac{a}{1+3vn^e}$

Question Number : 6 Question Id : 6406531862935 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

The mass of buyers (n) will be

Options :

6406536035239. ✗ $\frac{a-p+3vn^e}{vn^e}$

6406536035240. ✗ $\frac{a-p+vn^e}{3vn^e}$

6406536035241. ✓ $\frac{a-p+3vn^e}{3vn^e}$

6406536035242. ✗

$$\frac{p-a+vn^e}{vn^e}$$

Question Number : 7 Question Id : 6406531862936 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

The willingness to pay $(p(n^e, n))$ for the n^{th} unit of the good when n^e units are expected to be sold will be

Options :

6406536035243. ✓ $a + 3vn^e(1 - n)$

6406536035244. ✗ $n(a + 2vn^e)$

6406536035245. ✗ $(a + 3vn^e)(1 + n)$

6406536035246. ✗ $(a + 3vn^e)(1 - n)$

Question Number : 8 Question Id : 6406531862937 Question Type : MSQ

Correct Marks : 1 Max. Selectable Options : 0

Question Label : Multiple Select Question

$p(n^e, n)$ is _____ (more than one options are correct)

Options :

6406536035247. ✗ increasing function of n

6406536035248. ✓ decreasing function of n

6406536035249. ✗ decreasing function of n^e

6406536035250. ✓ increasing function of n^e

Question Number : 9 Question Id : 6406531862938 Question Type : MCQ

Correct Marks : 1

Question Label : Multiple Choice Question

The fulfilled-expectations demand curve in this setting will be **(consider $(1-n)=m$)**

Options :

6406536035251. ✗ $(a + 3vm)$

6406536035252. ✖ $m(a + 3\nu m)$

6406536035253. ✔ $a + 3\nu m(1 + m)$

6406536035254. ✖ $(a + 3\nu m)(1 - m)$

Question Id : 6406531862939 Question Type : COMPREHENSION Sub Question Shuffling Allowed : No Group Comprehension Questions : No Question Pattern Type : NonMatrix Question Numbers : (10 to 12)

Question Label : Comprehension

Two roommates need to each choose to clean their apartment, and each can choose an amount of time $t_i \geq 0$ to clean. If their choices are t_i and t_j , then the player i's payoff is given by $(10 - t_j)t_i - t_i^2$. (This payoff function implies that the more one roommate cleans, the less valuable is cleaning for the other roommate.)

Based on the above data, answer the given subquestions.

Sub questions

Question Number : 10 Question Id : 6406531862940 Question Type : SA

Correct Marks : 1

Question Label : Short Answer Question

What is the best response of roommate 2 if roommate 1 chooses $t_1 = 0$? $t_2 =$ _____

Question Label : Comprehension

Consider two competing firms in a declining industry that cannot support both firms profitably. Each firm has three possible choices as it must decide whether or not to exit the industry immediately, at the end of this quarter, or at the end of the next quarter. If a firm chooses to exit, then its payoff is 0 from that point onward. Every quarter that both firms operate yields each a loss equal to -1 , and each quarter that a firm operates alone yields a payoff of 2. For example, if firm 1 plans to exit at the end of this quarter while firm 2 plans to exit at the end of the next quarter then the payoffs are $(-1, 1)$ because both firms lose -1 in the first quarter and firm 2 gains 2 in the second. The payoff for each firm is the sum of its quarterly payoffs. Formulate this as a normal form game considering that E denotes immediate exit, T denotes exit this quarter, and N denote exit next quarter.

Based on the above data, answer the given subquestions.
